

# PSW7 Series Pure Sine Wave Inverter/Charger

# On Inverter

- High overload ability up to 300% rated power(20 sec.)
- Low quiescent current, power saver mode

# **On Battery Charger**

- 3-step intelligent battery charging
- Uses PFC(power factor correction) for charger

## On Transfer

- 10ms typical teansfer time
- 15s delay before transfer when AC resumes

- Battery/AC priority switch Available for off grid solar/ wind system
- Auto Generator Starter
- Remote Control
- Battery Temperature Sensor

# PSW7 Series Pure Sine Wave Inverter/Charger

# **Applications**

 High overload ability of our PSW7 charger is up to 300% rated power(20 sec)

 PSW7 pure sine wave invrter adopts low quiescent current, and power mode to reduce

power consumption to 10W(3s sensing cycle)/3W(30s sensing cycle)\*,It can extract max. power from various batteries with different protections, and low voltage trip can be selected(9.5V/10V or 10V/10.5V)

- Uses PFC(power factor correction) for charger, which has less power consumption than conventional units
- It has 15s delay before transfer when AC resumes, and overload protection when our PSW7 pure sine wave inverter equips with generator.
- 10ms typical transfer time between battery and AC, which guarantees power continuity of PSW7 charger.
   Uses selectable input AC voltage(184-253V or 154-253V) for different kinds of loads.
- Our PSW7 charger allows start up and through power with depleted batteries. Its powerful charge rate up to 90Amp.
- It can offer 3-step intelligent battery charging, and equipped with 8 preset battery type selector foe totally flat batteries.
- LCD status display, battery/AC priority switch, RS232 communication port are available for our PSW7
  pure sine wave inverter, it also has 17 alarms/warnings for easier operation and trouble-shooting, and
  ability to switch the unit on/off. In addition, select/deselect power saver mode can be used too.
- Automatic Voltage Regulator Function (Optional)

On the Dc end ofinverter, there are 4 DIP switches which enable users to customize the performance of the device.

Switch NO	Switch Function	Position:0	Position:1		
SW1	Low Battery Trip Volt	10.0VDC	10.5VDC		
SW2	AC Input Range	184-253VAC	154-253VAC		
SW3	Load Sensing Cycle	30 seconds	3 seconds		
SW4	Battery/AC Priority	Utility Priority	Battery Priority		

## **Low Battery Trip Volt:**

The Low Battery Trip Volt is set at 10.0VDC by defauit. It can be customized to 10.5VDC.

# AC Input Range:

There are different acceptable AC input ranges for different kinds of loads. It can be customized from 184-253VAC to 154-253VAC.

### Load Sensing Cycle:

The inverter is factory defaulted to detect load for 250ms in every 30 seconds. This cycle can be customized to 3 seconds theu the SW3 on DIP switch.

# **AC/Battery Priority:**

Our inverter is designed AC priority by default. This means, shen AC input is present, the battery will be charged first, and the inverter will transfer the input AC to power the load.

The AC priority and Battery Priority switch is available upon request. When you choose battery priority, the inverter will inverting from battery despite the AC input.
